SPATIAL DISORIENTATION — NODE MAPPING INTERFACE

SUBJECT: NT — 13 KEYWORDS — BASE SHAPE: SKELETAL

The subject has experienced a radical dematerialization of familiar space, retaining only structural essence while stripping away all protective density and physical substance. This represents a dissolution of embodied presence—the self becomes translucent scaffold, utterly exposed and weightless within a lattice environment that offers no support or containment.

▼ SUBCONSCIOUS RECALL (INPUT)

Our school corridor, but everything solid was removed. Only edges remained — thin lines where walls met the ceiling. I could see through everything like a wireframe. My hands were transparent, just bones and light. The teacher's voice had no weight, dissolving into open air. No floor beneath me, only a lattice of pale lines. My sister's bicycle leaned against nothing, just the bare metal skeleton. Cold wind passed through me. I reached for a door handle but found only the outline where a door had been, a curved line suspended in space. Everything is reduced to a minimum structure.

GENERATED ARTIFACT

YOUR ARTIFACT — EXPLAINED

Your memory dissolved into something skeletal and strange—the machine caught that quality of reduction, everything pared down to its thinnest possible form. That feeling of watching a familiar space become transparent, reduced to just the bare lines that hold it together, shaped what the sculpture became. It started as a framework rather than a solid mass, keeping that sense of weightlessness and void.

Your specific connections guided how the form was built. When you linked "wireframe" to dissolve, the edges began to blur and merge into each other, making it hard to tell where one line ends and another begins—just like in your memory, where everything became continuous outline. You connected "transparent hands" to the material itself, so the sculpture is made of translucent pale resin, letting light pass through it the way your hands were bones and light. The texture you chose from "bones and light" gives the surface that sharp, fractured quality—rough and luminous at once, catching brightness in unexpected places. Your "cold wind" shaped how light falls across it, creating zones of sharp glare and shadow that make parts feel almost seared away. Both "open air" and "corridor" eroded the form, carving away its mass until only the essential geometry remained. Finally, you merged that "door outline" directly into the surrounding structure—not as something separate, but as curves that flow seamlessly into the skeletal whole, the ghost of a door dissolving into the lattice itself.

What you're looking at is your memory made visible: a suspended minimum structure, hollowed out but whole, where everything has been stripped to its absolute edge but nothing has truly disappeared.
